Education

Carleton University — Ottawa, Ontario
Bachelor of Computer Science — *September 2021 – April 2026*
CGPA: 3.4/4.0

Technical Skills

Languages: Java, Python, C/C++, JavaScript, HTML/CSS, Haskell, JSON, SQL
Frameworks & Technologies: React, Node.js, Express.js, AWS, PostgreSQL, MySQL, MongoDB, REST APIs
Developer tools: Git, GitHub, Docker, VS Code, IntelliJ, Cursor, Claude
Libraries: NumPy, Matplotlib

Projects

GrindNSharpen | TypeScript, Express.js, PostgreSQL, JWT, REST APIs
- Designed and developed a full-stack fitness web application using **React**, TypeScript, Express.js, and PostgreSQL, implementing application features based on user goals and training preferences.
- Developed and maintained **REST API** integrations with secure **JWT authentication**, protected endpoints, persistent user profiles, workout logging, and progress tracking.
- Designed and maintained a relational **PostgreSQL database**, implementing normalized schemas, automated migrations, and data seeding while using **Docker** to support a consistent development environment.
- **Developed and maintained automated frontend and backend tests**, configured **GitHub Actions CI/CD pipelines**, and deployed the application to a cloud-hosted environment using **Render.**

Library Management System (HinLIBS) | C++, Qt, STL
- Developed a desktop library management system using C++ and Qt, implementing features for book checkouts, returns, hold requests, and user account management.
- Designed and implemented interactive **Qt Widgets** interfaces, integrating frontend components with backend services to support borrowing, returning, and administrative workflows.
- Built service-layer business logic for hold queue management, duplicate hold prevention, and item availability validation using **STL algorithms**, lambda expressions, and object-oriented design principles.
- Collaborated in a team using **Git** for version control, contributing features, resolving merge conflicts, testing functionality, and troubleshooting application issues.

Movie Library Manager | Python, JSON
- Built a lightweight movie management system leveraging JSON as the primary data storage format.
- Designed and maintained structured JSON schemas to store and organize movie metadata such as titles, ratings, and watch status.
- Implemented functionality to parse, update, and maintain persistent data through efficient JSON read/write operations.

Experience

General Labour — May 2024 - Aug 2024
Linamar Corporation — *Guelph, Ontario*
- Operated in a high-throughput production environment, consistently meeting production, quality, and efficiency requirements.
- Performed quality assurance and troubleshooting checks to identify defects and maintain established product standards.
- Collaborated with team members to identify and resolve workflow issues while maintaining continuous production operations.

Warehouse Associate — May 2021 - Aug 2021
Pioneer Technology Warehouse — *Guelph, Ontario*
- Managed inventory by unloading shipments, accurately scanning and tracking items, and organizing stock efficiently.
- Evaluated product condition to identify issues and determine suitability for resale or liquidation.
- Collaborated with team members to prioritize tasks and resolve operational issues while maintaining efficient workflows.

Factory Worker — Nov 2020 - Dec 2020
Polycon — *Guelph, Ontario*
- Assisted in assembly line production by organizing and assembling automotive components according to production requirements.
- Maintained a structured and efficient workspace to support consistent production and quality standards.
